

Elementary Astronomy Education in Taiwan

Chi Ling Wu

National Taipei University of Education, Taiwan

Astronomy is long presence in history but research in astronomy education is a very new field, especially in Taiwan. There are some big astronomy idea is taught not only in elementary school but also in informal science institution as well as some promoting programs in university and amateur association, but lack of connection among them. I will try to inquire formal astronomy curriculum and teaching in elementary school, informal astronomy education in science institutions and another organizations or studio in quantitative and qualitative approaching; then, analyze the gape among them. Finally, I try to find out proposal for integration.
